1. Repair information

1-1 Customer satisfaction statement

We hold ourselves to the highest standards of customer satisfaction and service.

- Combining perfect technical solutions with a customer-oriented approach is our top priority.
- We treat our customers we serve with kindness, loyalty, respect and dignity.
- We are committed to earn customers' trust continuously through excellence in repair solutions.
- We keep our promises and commitments to our customers.
- Committed to quick and easy resolution of all support issues, we deliver industry-leading response times.

Guide

We listen carefully to our customers' requirements and always find an optimum solution for their needs. We are committed to your satisfaction and have procedures in place to provide you with a fair, timely and effective means to resolve problems. It combines industry leading preventive assistance with responsive support that helps us address problems quickly and effectively. We will continuously maintain and improve our services to satisfy the needs of our customers.

1-2 Warranty and repair service information

(1) General terms and conditions

It is guaranteed to be free of charge from defects in material and workmanship under normal use for a period of one year from date of purchase.

Digital Camera and lens come with a one year limited warranty from the date of purchase.

*** The duration of the warranty depends on the laws in the country in which it was purchased.**

The following information will be required to process warranty requests:

- a. We imply warranties to one year from the original date of purchase. In the event that the purchaser is unable to provide a warranty card or proof of purchase, the warranty period will be determined by the date of manufacture. The warranty period shall be decreased to three months from the original product manufactured date.
- b. The coverage under this warranty begins on the date of your purchase of the product. In the event that a warranty card or proof of purchase is not available, a purchase receipt, preferably the purchase invoice, to confirm the date of purchase is required for warranty service.
- c. In the event that a valid date of purchase is not available, the warranty period will be determined by the date of manufacture. The warranty period shall be decreased to three months from the original product manufactured date.

(2) Limited Warranty

It reserves the right to retain any parts or components replaced at its discretion in the event of a defect noticed in the product. The period with respect to retaining components may vary respectively depending on its components. We are not liable to repair or replace its faulty product after the Warranty Period has expired.

* We warrant its retaining camera and lenses for five years and three years for the accessories.

- a. If a warranty claim is filed after the product has been discontinued, we reserves the right to honor the components warranty. Warranty period may vary depending on the type of components.
- b. In the event that no identical warranty information is available for service repair, company has the right to provide warranty. The warranty does not affect the consumers' rights against the company related to its information.

For the length of the period indicated on the chart below, it starts with the date of original purchase.

(3) Warranty Period for components

Our liability under this warranty shall be limited to the following:

- a. In the event of a same malfunction problem within two months after repair service by Samsung authorized technician, we will repair or replace free of charge the component of the product which is found to be defective.
- b. In the event of the component that you have paid the replacement cost is returned under normal use within one year at our premises, such components will be replaced free of charge component of the product which is found to be defective.

<Table. 1-1 Warranty Periods for Parts>

Part Name	Warranty Period
Battery Charger	Six months
AC Adaptor	
Battery	
Remote Control	
CD Software	Three months
Earphone	
Pouch for camera	Not applicable
Cable	

(4) Repair Claims

1) Repair free of charge

Essentially, the following causes of damage are covered:

- a. Failing to function properly under normal use during the limited warranty period.
- b. Repair Services free of charge is granted for the performance of a specific contract.

2) Repair charges

This warranty does not cover damage caused by:

- a. Defect occurring after the expiration of the Warranty Period.
- b. Damage due to negligence, immersion in water, impact, loss and tampering.
- c. Repair or alteration performed by any party other than Samsung authorized technicians.
- d. Misuse or other improper use of the power button.
- e. Exhausted parts such as batteries, lamps and filters, etc.
- f. Defect that occurs due to sand, dirt liquid, etc. entering the inside of the product casing.
- g. Consumable parts which have ceased working through normal use such as as earphone, battery discharger and various accessories.
- h. Products purchased second hand or any damage that occurs due to a second hand or repair performed by anyone other than Samsung or a Samsung authorized service station.
- i. Fire, earthquake, flood or other natural disasters.

The warranty cover period for components is listed below as per table 1-2.

<Table. 1-2 Warranty Period for components>

Types of consumer damages			Compensation	
Failing to perform or failing to function properly under normal use	Required for essential repair within 10 days after the purchase		Replace the product or refund	-
	Required for essential repair within one month after the purchase		Replace the product or repair at free of charge	Repair charges
	Applicable to repair	Problem occurred twice due to same malfunction	Free of charge	
		Problem occurred three times due to same malfunction	Replace the product or refund	Repair charges
		Problem occurred four times due to some other malfunction		
Not applicable to repair	Within the period with respect to retaining components		Replace the product at the cost of the depreciated value or refund its price added 10% of depreciation	
Failing to perform or failing to function properly as a result of willful intent and negligence of customer	Applicable repair			Repair charges
	Not applicable to repair (Except for defects or malfunction as a result of fire or flood or other natural disasters)		Replacement charge	Repair charge and replace the product at the cost of the depreciated value

1-3 Precaution for disassembly and reassembly

CAUTION

1. Use the anti-static handling procedures included with the anti-static mat to ensure that there is no electrostatic discharge and component damage.
2. Static electricity is the biggest danger to the PCB parts you are about to disassemble or assemble. It's important to use your anti-static wrist strap to prevent damage to these components.
3. Dismantling a discrete electronic component such as main capacitor is dangerous. The capacitor contains high voltage, which can cause a severe electric shock if you touch it. This holds a charge even when the unit is not plugged in and is capable of delivering a fatal shock.
4. Using excessive force during disassembly and assembly can damage locking parts. Use care when handling "Locking parts" to avoid damage to FPCB or wire. Apply pressure only at the points designated in the maintenance instructions.
5. Due to increasing environmental concerns, a number of restrictions have been placed on the material content of electronic components and electronic assemblies. It requires utilizing Lead-Free (Pb-free) Soldering.
6. The following precautions must be observed when handling such components below.

<Table. 1-3 Precaution for disassembly and reassembly>

Component	Precautions
FPCB	FPCB is brittle material. It can be easily damaged thus it should be handled with care. It is recommended to use wooden or plastic tweezers for manual placement.
CCD (CMOS) IR CUT Filter LCD, LENS	Be careful not to stained your finger. It is recommended to use wooden or plastic tweezers for manual placement. Stain is often caused by the Alcohol used in these components. Find a clean, well-ventilated place to do your work.
PCB	Use an anti-static mat as well as an anti-static wrist strap to avoid ESD damage to PCB.
CONNECTOR	The use wooden or plastic tweezers is recommended for manual placement. Metal tip tweezer might make marks or damage.
BARREL	Always follow proper direction while assembling the components of the barrel.

2-4 About the memory card

The memory capacity may differ depending on shooting scenes or shooting conditions. These capacities are based on a 2 GB microSD card:

<Table. 2-5 Memory card capacity>

Size		Super Fine	Fine	Normal	
P h o t o s		4,608 X 3,456	219	432	640
		4,608 X 3,072	245	483	715
		4,608 X 2,592	288	567	836
		3,648 X 2,736	341	669	984
		2,832 X 2,832	418	817	1,196
		2,592 X 1,944	638	1,228	1,777
		1,984 X 1,488	1,006	1,897	2,692
		1,920 X 1,080	1,329	2,461	3,437
		1,024 X 768	2,508	4,359	5,780

Size		30 FPS	
*V i d e o s		1,920 X 1,080	Approx. 18' 03"
		1,280 X 720	Approx. 25' 53"
		640 X 480	Approx. 46' 12"
		320 X 240	Approx. 257' 31"
		For Sharing	Approx. 257' 31"

* The figures above are measured without using the zoom function. Available recording time may vary if you use the zoom. Several videos were recorded in succession to determine the total recording time.

2-5 About the battery

<Table. 2-6 Battery specifications>

Specification	Description
Model	SLB-10A
Type	Lithium-ion battery
Cell capacity	1,030 mAh
Voltage	3.7 V
Charging time *(when the camera is switched off)	Approx. 240 min

* Charging the battery by connecting it to a computer may take longer.

<Table. 2-5 Battery life>

Average shooting time/ Number of photos		Test conditions (when the battery is fully charged)
Photos	Approx. 140 min/ Approx. 280 photos	<p>The battery life was measured under the following conditions: in P mode, in darkness,  resolution, Fine quality OIS on.</p> <ol style="list-style-type: none"> 1. Set the flash option to Fill in, take a single shot, and zoom in or out. 2. Set the flash option to Off, take a single shot, and zoom in or out. 3. Perform steps 1 and 2, waiting 30 seconds between each step. Repeat the process for 5 minutes, and then turn off the camera for 1 minute. 4. Repeat steps 1 to 3.
Videos	Approx. 100 min	Record videos at  resolution and 30 FPS.

- The figures above are measured by Samsung's standards. Your results may differ, depending on your actual usage.
- Several videos were recorded in succession to determine the total recording time.
- When using network functions, the battery will be depleted more quickly.

3. Disassembly and reassembly

3-1 Disassembly of main unit

1. Remove the **2 screws** on the left side, **2 screws** on the right side and **1 screws** on the bottom side.

15. Remove the **ASSY COVER FRONT**

Fig.. 3-15

16. **Discharge** the part marked in red circle.

CAUTION

Discharge the condenser.

Fig.. 3-16

17. Remove the **main condenser**.

18. Remove the **4 locking structure parts** marked in circle with tweezers.

Fig.. 3-17

19. Remove the **ASSY COVER TOP**

Fig.. 3-18

- 20. Remove the **2 solders** marked in red circle as illustrated in **Fig. F**.
- 21. Remove the **FPCB** from the connector as illustrated in **Fig. G**.
- 22. Remove the **5 screws**.

CAUTION

- 1. Be careful not to touch the surrounding circuitry and component when removing the solder.
- 2. Use extra care when removing the FPCB from the connector.

Fig.. 3-19

23. Remove the **ASSY WIFI LED** and **ASSY POP UP / ASSY PCB TOP**.

Fig.. 3-20

24. Remove the **3 solders** marked in red circle as illustrated in **Fig. H**.

CAUTION

Be careful not to touch the surrounding circuitry and component when removing the solder.

Fig.. 3-21

25. Remove the **ASSY POP UP**

Fig.. 3-22

26. Remove the **3 locking** structure parts as illustrated in **Fig. I** and **Fig. J** with tweezers.

27. Remove the following parts in the order indicated below.

- ① **PLATE CHAMBER**
- ② **HINGE COVER BATTERY**
- ③ **SPRING ETC COVER BATTERY**
- ④ **ASSY COVER BATTERY**
- ⑤ **SPRING ETC BATTERY PUSH**
- ⑥ **HOLDER STRAP**

Fig.. 3-23

28. Remove the following parts in the order indicated below.

- ① RING-E
- ② SPRING TS
- ③ LEVER BATTERY LOCK
- ④ COVER SOCKET

Fig.. 3-24

29. Remove the 3 screws.

Fig.. 3-25

30. Remove the following parts in the order indicated below.

- ① ASSY PCB CIS
- ② SHEET-FILTER
- ③ CUSHION GLASS-IR CUT FILTER

Fig.. 3-26

3-2 Barrel Disassembly

1. Remove the **5 screws**.

Fig.. 3-28

4. Remove the **ASSY LENS BASE**.

Fig.. 3-29

5. Remove the **FPCB** from the **BARREL-OUTER GUIDE** as illustrated in **Fig. B**.

1. Pull the FPCB in the direction of the arrow

2. Pull the FPCB in the direction of the up .

Fig. B

Fig.. 3-30

6. Turn the part marked by finger tip fully counterclockwise and remove the **BARREL-OUTER GUIDE** as illustrated in **Fig. C**.

Fig.. 3-31

7. Remove the **BARREL BASE**.

Fig.. 3-32

8. Remove the **PLATE-OUTER GUIDE**.

Fig.. 3-33

9. Remove the **DECO RING-CAM**.

Fig.. 3-34

10. Turn the part fully clockwise along with the direction of the PIN and remove the **BARRE-ZOOMRING** as illustrated in **Fig. D**.

Fig.. 3-35

11. Remove the **PLATE-INNER GUIDE**.

Fig.. 3-36

12. Turn the part marked by finger tip fully clockwise and remove the **ASSY SUB BARREL-ZOOMRING** as illustrated in Fig. E.

Fig.. 3-37

13. Turn the part marked by finger tip fully counterclockwise and remove the **BARREL-INNER CAM** as illustrated in Fig. F.

Fig.. 3-38

14. Remove the **PLATE-INNER GUIDE** as illustrated in **Fig. G**.

Fig.. 3-39

3-3 Reassembly of barrel

3-3-1 How to use the lubricant for anti-friction to the ASSY BARREL assembly.

- Anti-friction lubricant serves to prevent from the possibility of defective parts.
- Replacement parts are required to apply the lubricant before installing the ASSY BARREL.

CAUTION

- HANARL is volatile product. Keep its container tightly covered.
- Make sure to shake the HANARL well first before you use it because it has a lot of particles in the bottom. (Otherwise it becomes ineffective.)
- Shake the HANARL until there are no lumps at all and apply it with brush.

1. Type of lubricant

<Table. 3-1 Type of lubricant>

Component Name	5.571mm	Name of lubricant
Lens Base	Sliding contact surfaces of AF Lens.	Grease KG-513
Others components	Inside and outside friction surface	HANARL UD-420K

* **Brand Name: Kanto Kasei**(<http://www.kanto-kasei.co.jp/e/index.html>)

* To purchase this product simply click on the URL above.

2. Instructions

1) Lubricating with Grease: Lens Base

Fig. 3-40

2) Lubricating with HANARL: Others components

Apply the HANARL to the Inside and outside friction surface of the components such as ZOOMRING, CAM BARREL, GUIDE PLATE as illustrated in image below.

⚠ CAUTION

- Make sure to shake the HANARL well first before you use it until there are no lumps.
- Apply the HANARL with a clean and good-quality brush, making sure the surface is clean.
- HANARL is volatile product. Keep its container tightly covered.

Fig.. 3-41

Fig.. 3-42

3-3-2 Barrel Disassembly

1. Align the parts marked by (a) respectively as illustrated in **Fig. A** and Turn the part slightly counterclockwise
2. Align the parts marked by (b), (c) respectively as illustrated in **Fig. B**. Then install the **BARREL-INNER GUIDE**.

CAUTION

Align the part respectively in the direction of the arrow as illustrated in the middle image and then install it.

Fig.. 3-43

3. Align the parts marked by (a), (b) & (c) respectively as illustrated in **Fig. C**.
4. Turn the part fully clockwise and remove the **BARREL-INNER CAM** as illustrated in **Fig. D**.

Fig.. 3-44

- Align the parts marked by (a), (b) & (c) respectively as illustrated in Fig. E.
- Turn the part marked slightly counterclockwise and remove the **ASSY SUB BARREL-ZOOMRING** as illustrated in Fig F.

Fig.. 3-45

- Align the parts marked by (a), (b) respectively as illustrated in Fig. G
Then install the **PLATE-INNER GUIDE**

Fig.. 3-46

8. Align the parts marked by **(a)** respectively as illustrated in **Fig. H**
9. Turn the part fully counterclockwise along with the direction of the PIN and remove the **BARRE-ZOOMRING** as illustrated in **Fig. I**.

CAUTION

Align the part respectively in the direction of the arrow as illustrated in the middle image and then install it.

Fig.. 3-47

10. Align the parts marked by **(a)**, **(b)** respectively as illustrated in **Fig. J**
Then install the **DECO RING-CAM**

Fig.. 3-48

11 . Align the parts marked by **a**, **b** & **c** respectively as illustrated in **Fig. K**
Then install the **PLATE-OUTER GUIDE**

CAUTION
Align the part respectively in the direction of the arrow
as illustrated in the middle image and then install it.

Fig.. 3-49

12 . Align the parts marked by **a**, **b** respectively as illustrated in **Fig. L**
respectively as illustrated in **BARREL-BASE**

Fig.. 3-50

13. Align the parts marked by **a**, **b**, **c** & **d** respectively as illustrated in **Fig. M**
Then install the **BARREL-OUTER GUIDE**

Fig.. 3-51

14. Connect the **FPCB** as illustrated in **Fig. N**

Fig.. 3-52

15. Install the **connector part** as illustrated in **Fig. O**

16. Align the parts marked by **Ⓐ**, **Ⓑ** respectively as illustrated in **Fig. P** Then install the **ASSY LENS BASE**

Fig.. 3-53

17. Install the **FPCB** as illustrated in **Fig. Q**

18. Tighten the **1 screws**.

Fig.. 3-54

19. Tighten the **5 screws**.

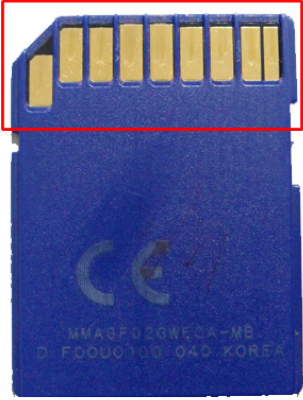

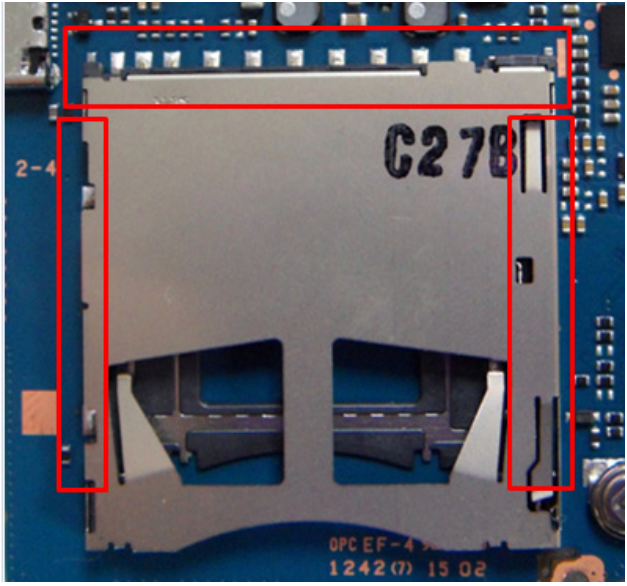

Fig.. 3-55

4. Troubleshooting

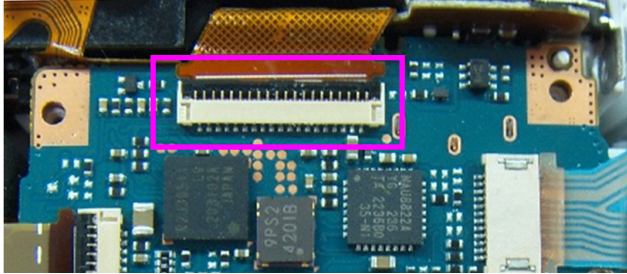

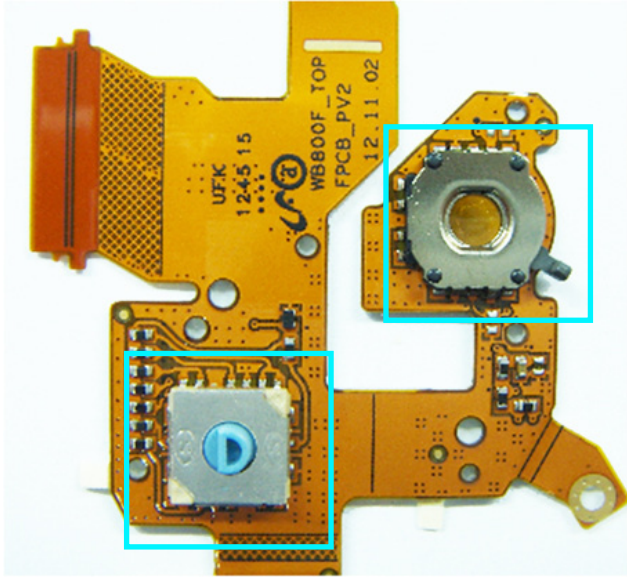

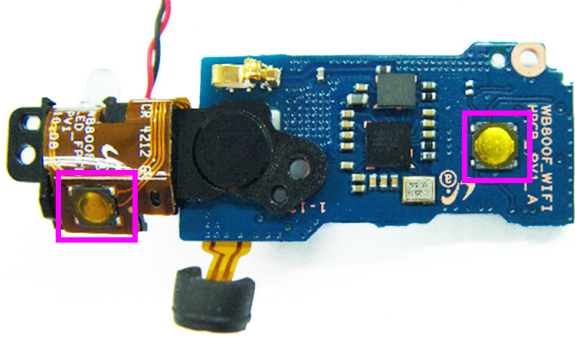

4-1 SD CARD detect fail/A/error

Situation Not recognize the memory card.

	Suggested remedies	Reference
1	Reinsert SD card after cleaning card's PAD pin.	
2	Check the mechanical defects of card socket's detect. Check the SMD states of card socket & nearby devices.	

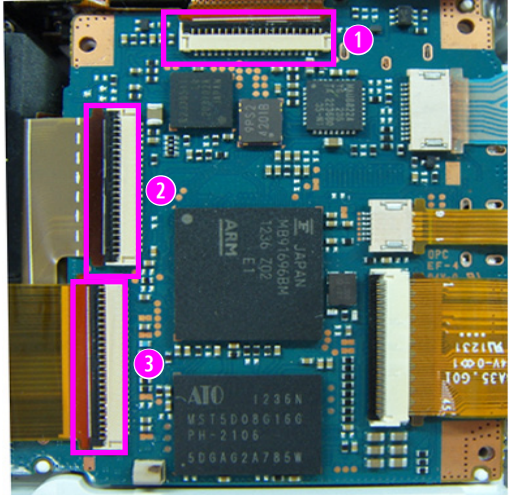

4-2 Switch problems on TOP (Power/Release/Zoom)

Situation The power, release, mode dial, zoom shutter does not work.

	Suggested remedies	Reference
1	Check the MAIN PCB -TOP FPCB connecting condition.	
2	Check the SMD states of each shutter & zoom switches related devices. Check each switch's mechanical defects.	
3	Check the SMD states of each power & smart link switches related devices. Check each switch's mechanical defects.	

4-3 MAIN PCB connection issues

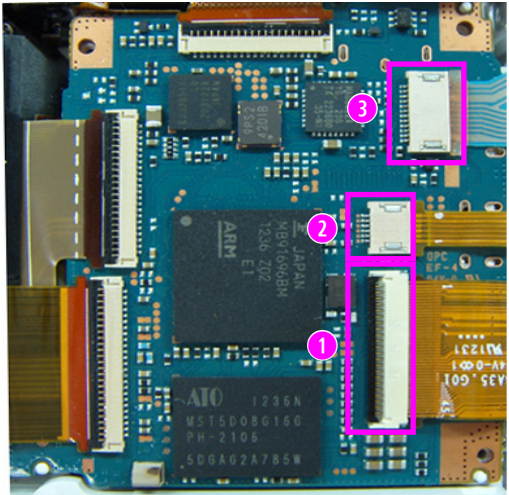

Situation 1. Cannot turn on the camera.

	Suggested remedies	Reference
1	<ul style="list-style-type: none"> ❶ Check the MAIN PCB -TOP FPCB connecting condition. ❷ Check the BARREL FPCB connecting condition. ❸ Check the Sensors FPCB connecting condition. 	 <p>The reference image shows a top-down view of the main PCB. Three specific connection points are highlighted with pink rectangular boxes and numbered 1, 2, and 3. Point 1 is at the top edge, point 2 is on the left edge, and point 3 is at the bottom edge. The PCB is populated with various components, including a large ARM processor and several memory modules.</p>

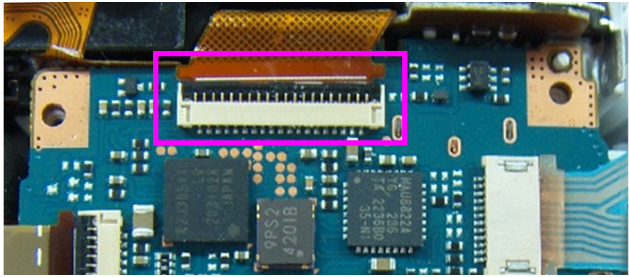

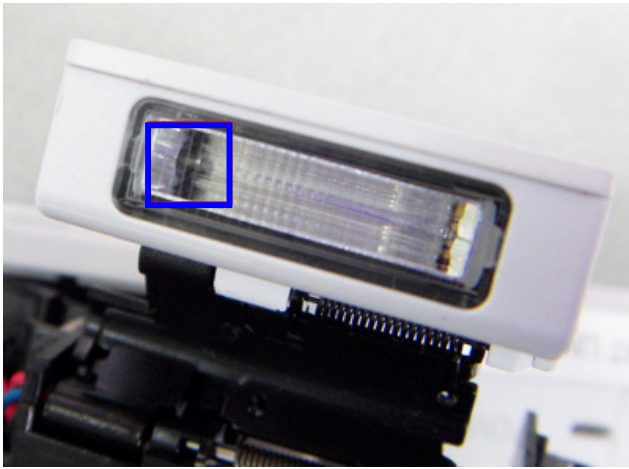

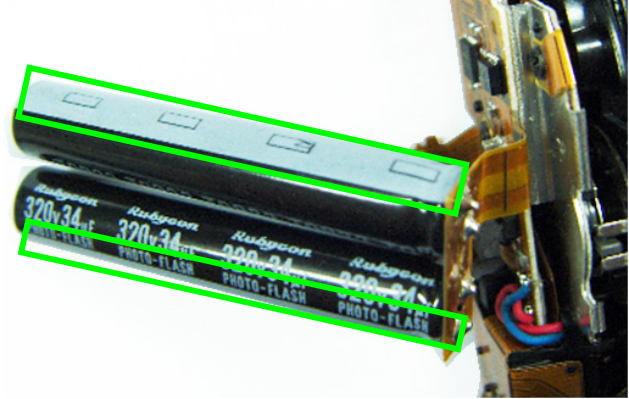

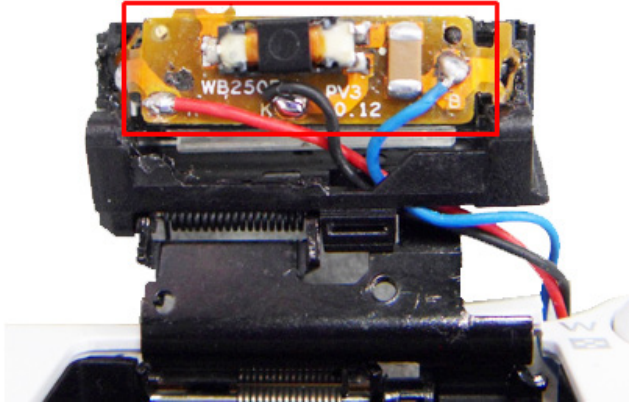

Situation 2. The white screen appear on display screen, or can not see display screen.

Situation 3. The touch does not work.

Situation 4. Does not input in Rear button.

	Suggested remedies	Reference
1	<p>Situation 2.</p> <ul style="list-style-type: none"> ❶ Check the LCD FPCB connecting condition <p>Situation 3.</p> <ul style="list-style-type: none"> ❷ Check the TSP FPCB connecting condition <p>Situation 4.</p> <ul style="list-style-type: none"> ❸ Check the KEY FPCB connecting condition 	 <p>The reference image shows a top-down view of the main PCB. Three specific connection points are highlighted with pink rectangular boxes and numbered 1, 2, and 3. Point 1 is at the bottom edge, point 2 is on the right edge, and point 3 is at the top edge. The PCB is populated with various components, including a large ARM processor and several memory modules.</p>

4-4 Flash related problems

Situation		The flash does not work.
Suggested remedies		Reference
1	Check the MAIN PCB -TOP FPCB connecting condition.	 A photograph of the main PCB with a pink rectangular box highlighting the FPCB connector area.
2	Check a reverse insertion of Xe-TUBE. means (-)  plus (+)	 A photograph of the flash assembly with a blue box highlighting the Xe-tube. To the left, a diagram shows a Xe-tube with a blue box on the negative (-) terminal and a red box on the positive (+) terminal.
3	Check the connector and polarity of Main Condenser.	 A photograph of the main condenser with a green rectangular box highlighting the connector and polarity markings.
4	Check a bad soldering of pop-up module and trig coil parts.	 A photograph of the pop-up module and trig coil parts with a red rectangular box highlighting the soldering area. Labels 'WB250' and 'PV3 0.12' are visible on the board.

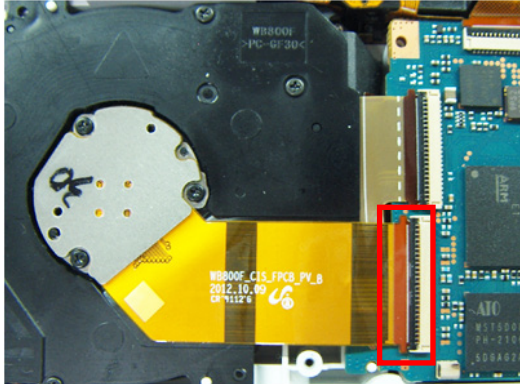

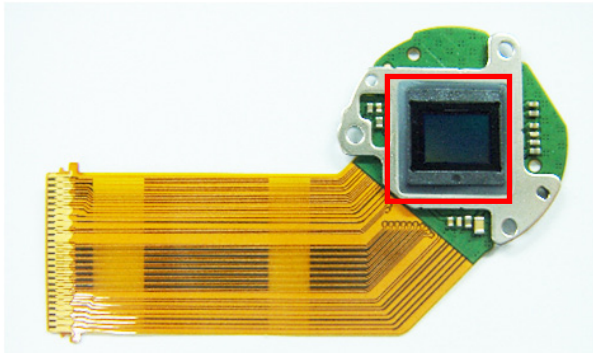

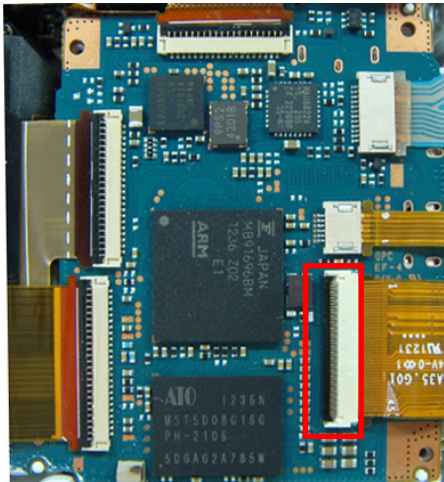

5

Check the SMD states of transformers.

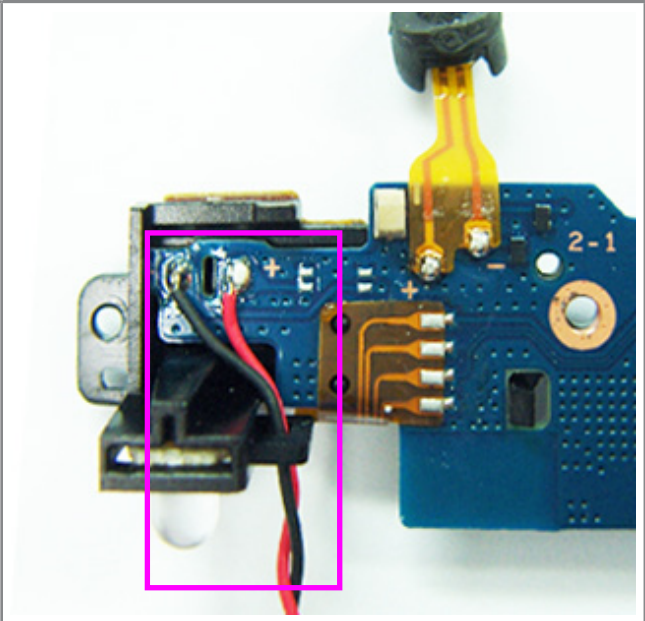

Check the pop-up flash and the connection of three wire damage & soldering.

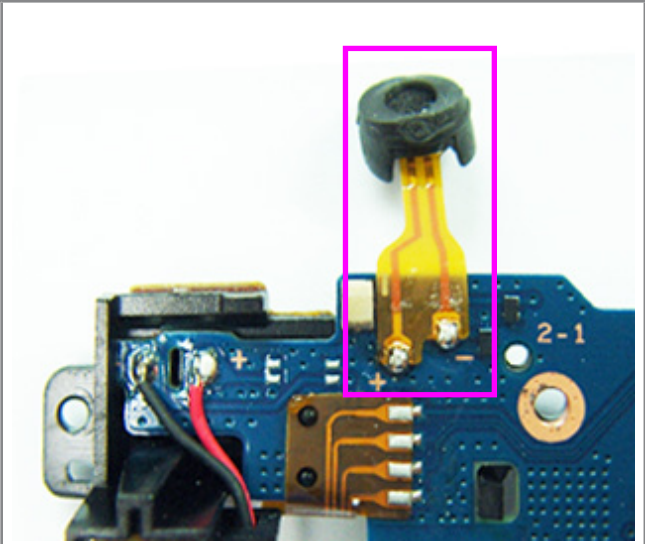

4-5 Image output related problems

Situation		When horizontal/vertical noise preview Image or emulsification occurs when preview black out occurs.
	Suggested remedies	Reference
1	Check the FPCB connecting condition and SMD states of CMOS CONNECTOR.	
2	Check the CMOS SENSOR ASSY crack. Change the CMOS SENSOR ASSY & check.	
3	Check the FPCB connecting condition and SMD states of CMOS connector.	

4-6 When you cannot hear the recorded sound

Situation		Does not sound.
Suggested remedies		Reference
1	<p>Check the connector and polarity of speaker. Check the soldering point and wire of speaker.</p>	

Situation		Be heard sound of button but have no sound of voice recording
Suggested remedies		Reference
1	<p>Check the polarity to soldering of MIC. Check the damage states of MIC FPCB.</p>

6. Block diagram

7. Firmware update

7-1 Product reset

This describes how to reset the camera to factory default setting.

1. First turn on the power of the camera.

Fig. 7-1

2. Press the (1) SHUTTER button + WIDE direction and then turn the (2) POWER off.

Fig. 7-2

3. Turn the power of the camera on again to check whether it has been reset.

Fig. 7-3

7-2 Version check

This describes how to check the version of the current firmware of the camera.

1. Use fully charged battery for power.
2. First turn off the power of the camera.
3. Press the (1) SHUTTER button + WIDE button, and then turn the (2) POWER on.

Fig. 7-4

4. Check the version of the firmware and then turn the power off.

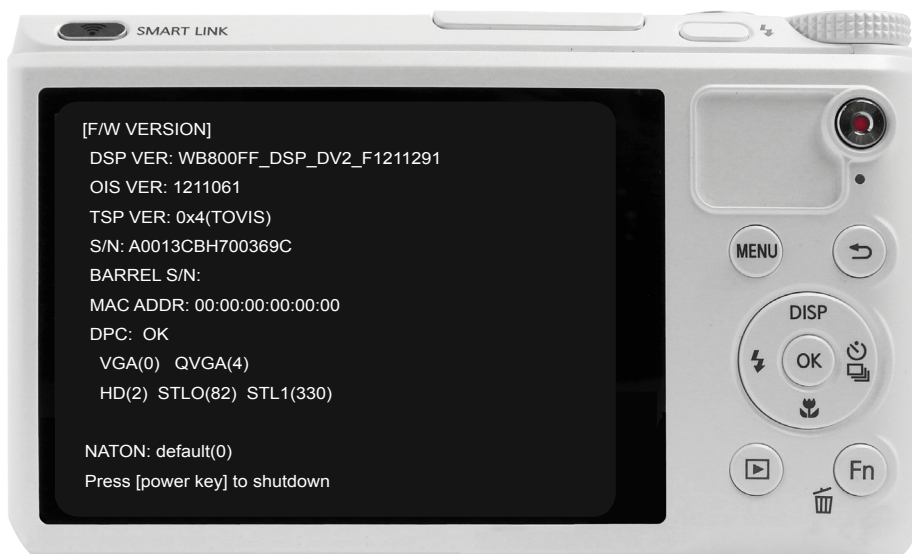

Fig. 7-5

7-3 Update

◆ How to execute the firmware

The firmware is configured in the following structure.

Code area is where the execution codes to operate the camera are located, and the Partition [1:3] area is where the various resources necessary to operate the camera are saved. Among these areas, Partition 3 area is where the Defective Pixel adjustment data and Lens Shading adjustment data are saved.

User Area is where the setting values are saved through the menu when the user uses the camera, and the adjusted data through integrated process is saved.

<Table. 7-1>

code	partition1	partition2	partition3	User Area
------	------------	------------	------------	-----------

▶ Reference of general version:

- As the version to update the Code + Partition [1:2] area, this protects both the adjusted data saved in the User Area and the Partition 3 area.

1. Insert the memory card containing the firmware data file and Update Script file into the camera.

* You need two files to update the firmware and the required files are firmware data file and Update Script file.

* Because all data saved on the FLASH memory will be reset when you update the firmware, back up your data before proceeding with the update.

2. Use the AC adaptor or fully charged batteries for the power.

* You can proceed with the update only when the battery level is full (Icon showing full up to 3rd level).

3. Turn on the power of the camera.

Fig. 7-6

4. The version of the firmware to update will be displayed on the LCD screen. When you press the SHUTTER button, the firmware update will start.

Fig. 7-7

5. The progress of the firmware update will be displayed on the LCD and the update will proceed.

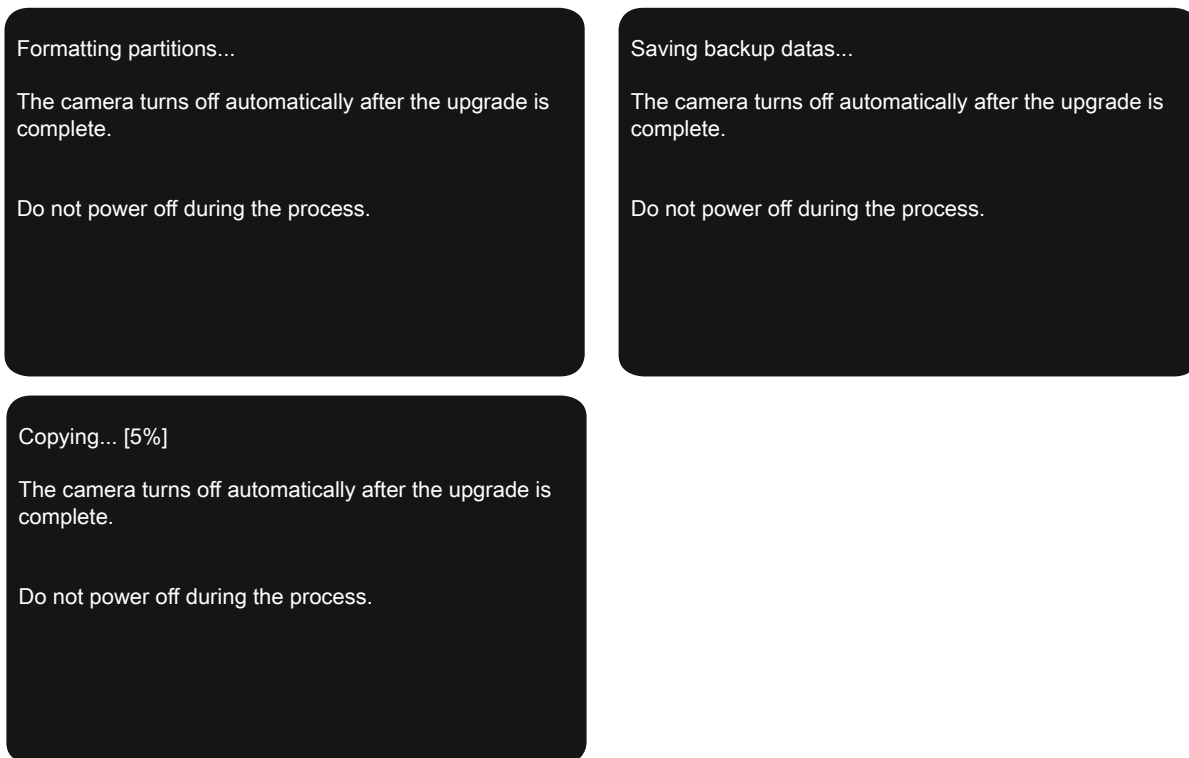

Fig. 7-8

6. When the update is completed, the camera will automatically be turned off.

7-4 How to recover the MAIN PCB

- This section describes how to recover the MAIN PCB when camera stops functioning due to power failure or some other reasons during the firmware process.
- It is not necessary to go over all the adjustment process again since the existing adjustment data is deleted.

Required materials

1. SD card less than 1GB
 - It is recommended to use a SD card with less than 1GB.
2. Soldering iron
 - It is used to short out the TP on MAIN PCB.
3. The latest firmware files such as **DATAWB800.bin**.
 - You can download the latest firmware file from the K-zone or Samsung website.
 - Note that the name of the firmware file may vary depending on WB model.

1. Remove the camera as Fig. 7-9.
 - Removing the BACK COVER → KEY PCB.
2. Download the latest firmware file and copy to the SD card .
 - Save the latest version firmware file(DATAWB800.bin) into root folder in SD card.
 - Do not save the "fwup.txt" file. Only save the "DATAWB800.bin" file.
3. Insert the memory card containing the firmware data file into the camera.
 - * You can proceed with the upgrade only when the battery level is full (Icon showing full up to 3rd level).
4. Soldering the TP in red circle on Main PCB to short out the circuit.
 - Then press the power button to turn on the camera.

Fig. 7-9

5. LED will turn on blink when turn on the camera. The MAIN PCB recovery process will proceed.
 - (It will takes about 2 minutes.)
6. LED will turn off when the recovery process is complete.
7. Remove the Soldering.
8. Remove the SD card and then assemble the camera.
 - Assemble the KEY PCB → BACK COVER
9. Turn the power of the camera on again to check whether camera has been functioning.

8. Adjustment

8-1 Basic guide for adjustment

- After replacing an electronic part, you must make changes for each adjustment item in the **WB800F**.
- The following table shows the necessary adjustment item for replacing each part.
- Adjust when the camera must be fixed with a tripod and not moveless condition must be maintained.

1. After replacing an electronic part, you must make adjustments for each item by referring to the following table.

<Table. 8-1 Adjustment information>

	MAIN PCB	TOP FPCB POPUP PCB	BARREL ASSY	CIS ASSY
Firmware update	O	X	X	X
OIS CENTERING ADJ	O	X	O	O
PUNT(Auto Focus) ADJ	O	X	O	O
SHUTER CLOSE, CCD, IRIS ADJ	O	X	O	O
LENS SHADING ADJ	O	X	O	O
CIS DEFECT PIXEL ADJ (DPC)	O	X	O	O
FLASH & AWB ADJ	O	O	O	O
WIFI SETTING, MAC ADDR, SERIAL NO WRITE enter	O	X	X	X

2. Adjustment equipment

- Light source box: Light source box that supporting **LV 12**.
- The colour temperature specification of the Light box is **3300K**.(Yellow light source)
- Infinity Collimator for PUNT adjustment.
- Gray chart (18%) and DARK BOX for FLASH & AWB adjustment.
- POWER SUPPLY: 4.2V/2A

3. Adjustment program file

Save the "Adjustment" file and "cs_adj.txt" file on memory card as follows.

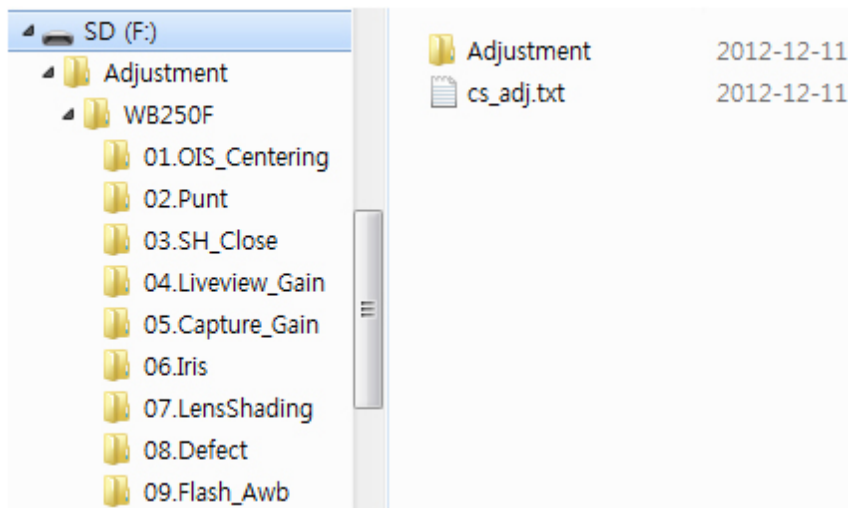

Fig. 8-1

4. Adjustment mode entry process.

1) Insert the memory card containing the two adjustment file into the camera and then turn on the power of the camera.

Fig. 8-2

2) Entering the adjustment mode to press the **WIDE direction + SHUTTER button** as shown below.

Fig. 8-3

3) The adjustment can be performed by select the adjustment item desired from the menu below.

※ Selection is touch or five direction keys

Fig. 8-4

8-2 OIS CENTERING ADJ

This adjustment is adjust by centre to location of OIS lens.

<Adjustment method>

1. Insert the memory card containing the adjustment file into the camera and then entering the adjustment mode.
2. Select the **OIS Centering** of adjustment menu.
3. Adjustment is made automatically.
 - OIS module will be operated left/right/up/down 2-3 times.
4. When the adjustment is completed, the camera will be off automatically.

CAUTION

Put your camera, face up, on a steady surface such as a table or anything solid that won't move. Don't put your camera on a highly unstable surface. Also don't put your camera down or hold it. The noise may significantly affect degrading the Gyro Sensor and Hall Sensor performance.

8-3 PUNT(Auto Focus) ADJ

- **Adjustment objective:** Adjustment for implement the performance of AF optimized by adjustment to assembly deviation of barrel(Lens).
- **Necessary equipment:** Infinity Collimator

<Adjustment method>

1. Refer to the following adjustment environment specification to adjust the focus.
 - 1) Used specification of Infinity Collimator.
 - Set the illuminance specification of the Collimator to 6 LV.
 - Maintain distance of less than 1cm between the end of the camera body tube to the lens surface of the Infinity Collimator.
 - The camera must be fixed while the adjustment is made.

Fig. 8-5

2) Adjustment method by using a infinite object

- The camera must be fixed with a tripod and levelled condition must be maintained.
- Set up the camera toward a building or object in infinite distance (more than 500m). (Do not use the chart)
- Set a cathedral, apartment or object with high contrast in day environment/AF area display.

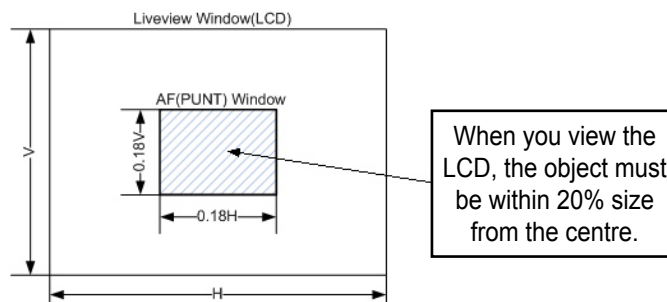

Fig. 8-6

CAUTION

When you begin the adjustment process at indoor, open the window and focus on a subject where it is essentially infinitely far away such as apartment or church expect all-glass building. Try not to attempt the adjustment process at night. It may generate the inaccurate test result.

2. Insert the memory card containing the adjustment file into the camera and then entering the adjustment mode.
3. Select the **Punt(Auto Focus)** of adjustment menu.
4. Adjustment is made automatically.
5. When the adjustment is completed, the camera will be off automatically.

8-4 SHUTTER CLOSE, CIS GAIN, IRIS ADJ

- Adjust the Close timing of the device shutter by camera.
- Because there is a deviation of shutter closing time by each set, make adjustments by each set to reduce this deviation.

<Adjustment method>

1. Prepare the Light source box that can be adjusted to **LV 12**.
2. Insert the memory card containing the adjustment file into the camera and then install the camera to the Light source box.
 - * Luminance specification of the Light box is **LV 12**.
 - * The colour temperature specification of the Light box is **3300K**.

Fig. 8-7

3. Select the **Shutter Close Time** of adjustment menu.
4. The adjustment process will automatically start.
 - ① Check the number of maximum adjustments which have been set, and adjust the Shutter close time, CMOS sensor gain, IRIS
 - ② Carry out inspection by referring to the specifications for brightness.
 - The line delay and sub delay, Gain, IRIS value are adjusted to find the proper values for the specifications for brightness.
 - ③ If the result value are within spec, it is OK. Otherwise, it is NG.
 - ④ Write the adjustment value in the EEPROM by referring to the EEPROM WRITE data.
 - ⑤ Write the result of the adjustment value in the data file by referring to the CARD WRITE data.
5. When the adjustment is completed, the camera will automatically be turned off.
6. **Liveview Gain, Capture Gain, Iris** are also perform in the same way.

8-5 LENS SHADING ADJ

- Adjust the lens shading for the brightness of the periphery of the lens for each camera.
- Because the surrounding brightness is darkness compared to the centre for lens, correction to brightness so that the surrounding brightness is higher.

<Adjustment method>

1. Prepare the Light source box.

- * Luminance specification of the Light box is **LV 12**.
- * The Light box is located at 10mm ± 1mm with the body tube open.
- * The colour temperature specification of the Light box is **3300K**.

2. Insert the memory card containing the adjustment file into the camera and then install the camera to the Light source box.

Fig. 8-8

4. Select the **Lens Shading** of adjustment menu.

5. The adjustment process will automatically start.

- ① Adjust the Lens Shading with large lense, Zoom 0 condition.
- ② Refer to the EEPROM WRITE information and write the adjustment result to EEPROM.
- ③ Write the result of the adjustment value in the data file by referring to the CARD WRITE data.
- ④ Set the lower and upper specification.

6. When the adjustment is completed, the camera will automatically be turned off.

8-6 FLASH & AWB ADJ

- Set a limit to the illuminance by the Flash light to classify the hardware defect.
- Classify the set that deviates from the specifications by illuminating times and then calculate the flash R, B gain.
- AWB HIGH item is adjusted simultaneously.

<Adjustment method>

1. Attach an 18% reflective paper in the dark room where the light is blocked.
2. Set up the camera in the dark room.
3. Set the distance between the reflective paper and camera to 50cm.

Fig. 8-9

4. Insert the memory card containing the adjustment file into the camera and then entering the adjustment mode.
5. Select the **Flash & AWB** of adjustment menu.
6. The adjustment will automatically start.
 - ① Compare the reference illumination for 2 illuminations using the flash algorithm, and make a judgment.
 - ② By using the average value of the illuminance of 2 times, check the R and B gain to make Pass/No Pass judgment.
 - ③ Record the R and B gain to EEPROM during flash process and R, B gain success.
7. When the adjustment is completed, the camera will automatically be turned off.

8-7 CIS DEFECT PIXEL ADJ

Calibrate the Defective pixel of Image Sensor(CIS) for each camera.

<Adjustment method>

1. Insert the memory card containing the adjustment file into the camera and then entering the adjustment mode.
2. Select the **Defect(CIS Defect Pixel)** of adjustment menu.
3. The adjustment will automatically start.
 - ① Check the set reference level, exposure time and loop, and execute the Defective Pixel calibration.
 - ② Refer to the specification (Maximum number of defective cells) and execute the check.
 - ③ Refer to the CARD WRITE information to write the number of defective cells to the data file.
4. When the adjustment is completed, the camera will automatically be turned off.

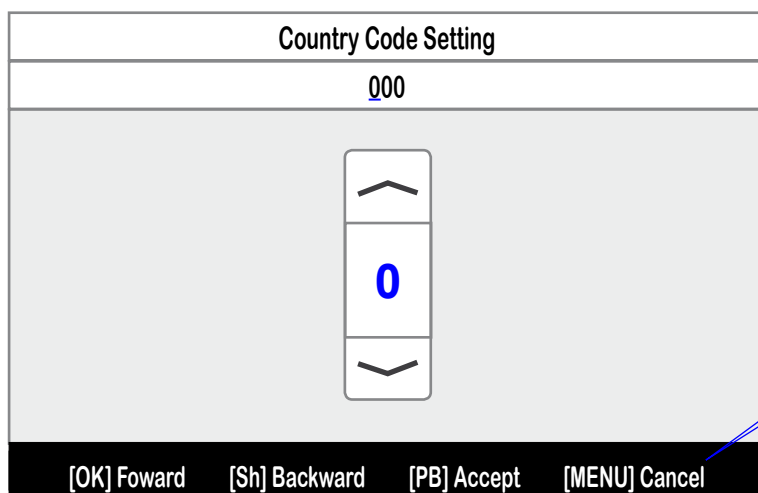

8-8 COUNTRY CODE(Wi-Fi) Input

- In case of Wi-Fi Built-in models, MAC Address Write procedure is required after replacing Main PCB.
- Symptom : If country is not selected after replacing Main PCB;
 - Proper SNS for its country as below is not available.
 - Keypad for its country when using Wi-Fi (English default)
 - Wi-Fi data transmission speed may be slow.

<Adjustment method>

1. Insert the memory card containing the adjustment file into the camera and then entering the adjustment mode.
2. Select the **Country Code** of adjustment menu.
3. Input the 3-digit country code in the screen below.

[Zoom] - Number increases, decreases
 [OK] - Forward
 [Shutter] - Backward
 [Playback] - Accept
 [Menu] - Cancel

Fig. 8-10

8-9 MAC ADDRESS(Wi-Fi) Input

When you can not find MAC Address due to failure or malfunction of components in the Main PCB, contact to headquarter. It will offer the new MAC Address.

<Adjustment method>

1. Insert the memory card containing the adjustment file into the camera and then entering the adjustment mode.
2. Select the **Mac Address** of adjustment menu.
3. Input the 12-digit Mac Address in the screen below.

[Zoom] - Number increases, decreases
 [OK] - Forward
 [Shutter] - Backward
 [Playback] - Accept
 [Menu] - Cancel

Fig. 8-11

8-10 SERIAL NO. Input

- If the Serial Number label of the camera has been Erased, check the Serial Number into version check mode.
 - Version check mode: Press the (1) SHUTTER button + WIDE button, and then turn the (2) POWER on.
- Check the repair history or genuine to through Serial Number of camera.

<Adjustment method>

1. Insert the memory card containing the adjustment file into the camera and then entering the adjustment mode.
2. Select the **Serial No.** of adjustment menu.
3. Input the 15-digit Serial No. in the screen below.

[Zoom] - Number increases, decreases
 [OK] - Forward
 [Shutter] - Backward
 [Playback] - Accept
 [Menu] - Cancel

Fig. 8-12

8-11 Input confirm

1. When checking the version (Press SHUTTER button and WIDE direction to turn on), Mac address, Serial number, Nation appears on the screen.

Fig. 8-13

2. Check the Mac address, Serial number, Nation.

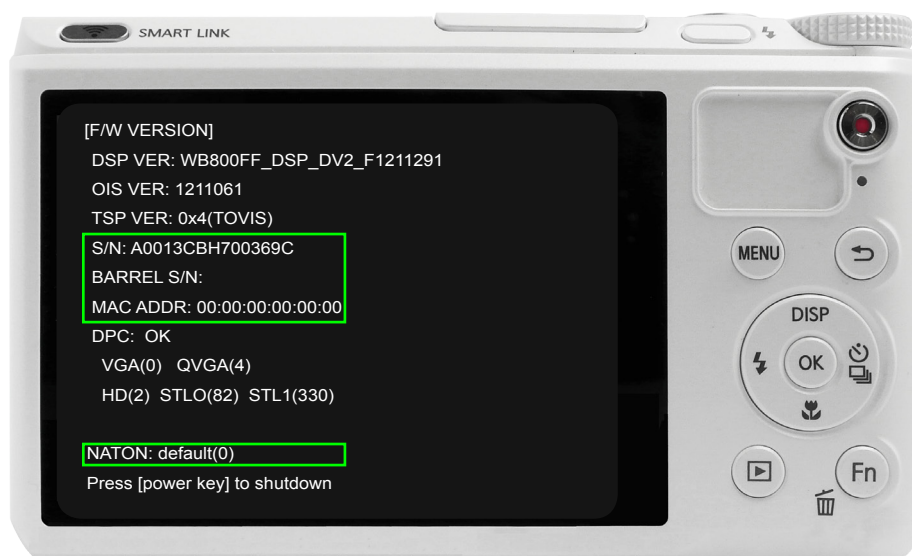

Fig. 8-14
